

*Innovative Software and Service Solutions
for the Calibration and Maintenance Community*

Project Engineering and Maintenance

Here is a summary of usCalibration's Project Engineering and Maintenance capabilities and offerings:

1. usCalibration is a no-nonsense, aggressive, and results-oriented manufacturing maintenance and logistics solution provider.
2. usCalibration solves major maintenance problems, manages major maintenance projects, with especially strong competencies in electrical and electronic systems and facilities, operations management, logistics and procurement. usCalibration has strong competencies in all disciplines of technical maintenance including mechanical, electrical, and electronic.
3. usCalibration utilizes process improvement tools such as Pareto analysis to pinpoint dominant contributors to failure and reduce failure rates for the most costly failures first.
4. usCalibration will quickly mobilize a skilled on-site team to virtually any location in the world.
5. usCalibration provides FAST results for emergency problems, typically by overwhelming the problem with speedy deployment and management of ample quantities of high-end workers and equipment. After the emergency is under control, usCalibration downsizes quickly and supports the customer's transition to an economical ongoing solution with documentation, training, and HR services as needed.
6. usCalibration provides economical ongoing solutions for ongoing maintenance and quality assurance requirements.
7. Project Management Offerings: Upgrades, repairs, preventive maintenance, reviews, failure rate reduction, ISO 9001 calibration management programs, Quality Assurance Programs, etc.

Jim Simmons, CEO and Technical Program Manager, will travel for initial meet, greet, and assessment.
